Best Audio Settings for Zoom Meetings with Music ~ Quoting from : https://www.youtube.com/watch?v=wkG7yOTRIAk

FIRST - Make sure you download the most updated version of Zoom on https://zoom.us/download on your DESKTOP, not a phone, Chromebook, or iPad.

SECOND - These settings are in the app itself, NOT in your account online. You need to open the app and check the settings or start a meeting and go to audio settings from there.

THIRD - Mac's and Windows might look different. I am a solid Windows user and so have no access to what it might look like on a Mac.

FOURTH - If you can, have your students disable background noise too. If they don't have access to a laptop or tower, don't worry about it. HOWEVER, both teacher and

student CANNOT have the Original Sound turned on, otherwise, it causes distortion or "clipping".

FIFTH - Always test first! " :Testing is how I discovered the best settings for me and my students.""Test!"
